

1) Turning Vehicle Data into Profit

Modern vehicles generate 25 GB of data every hour, creating significant challenges in data management, cybersecurity, and compliance. Veritis managed services turn those connectivity hurdles into profitable opportunities.

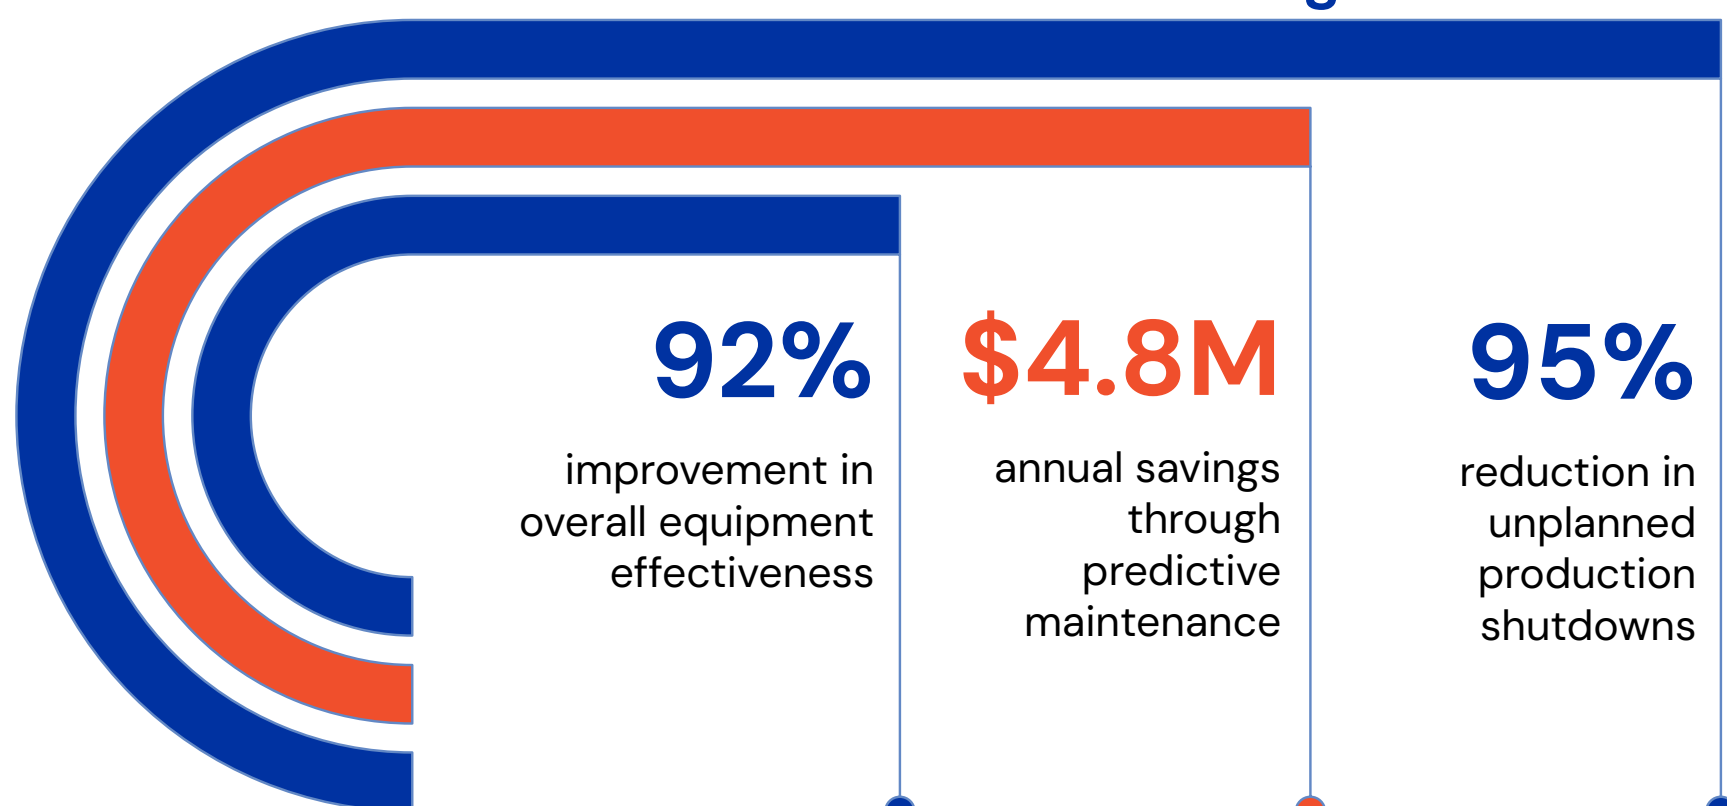

Immediate Impact

2) Seamless OT IT Integration for Smart Manufacturing

Smart factories need real time OT IT convergence to optimize production, robotics, and quality control. Veritis' manufacturing intelligence platform turns those data streams into actionable insights for ongoing improvement and cost savings.

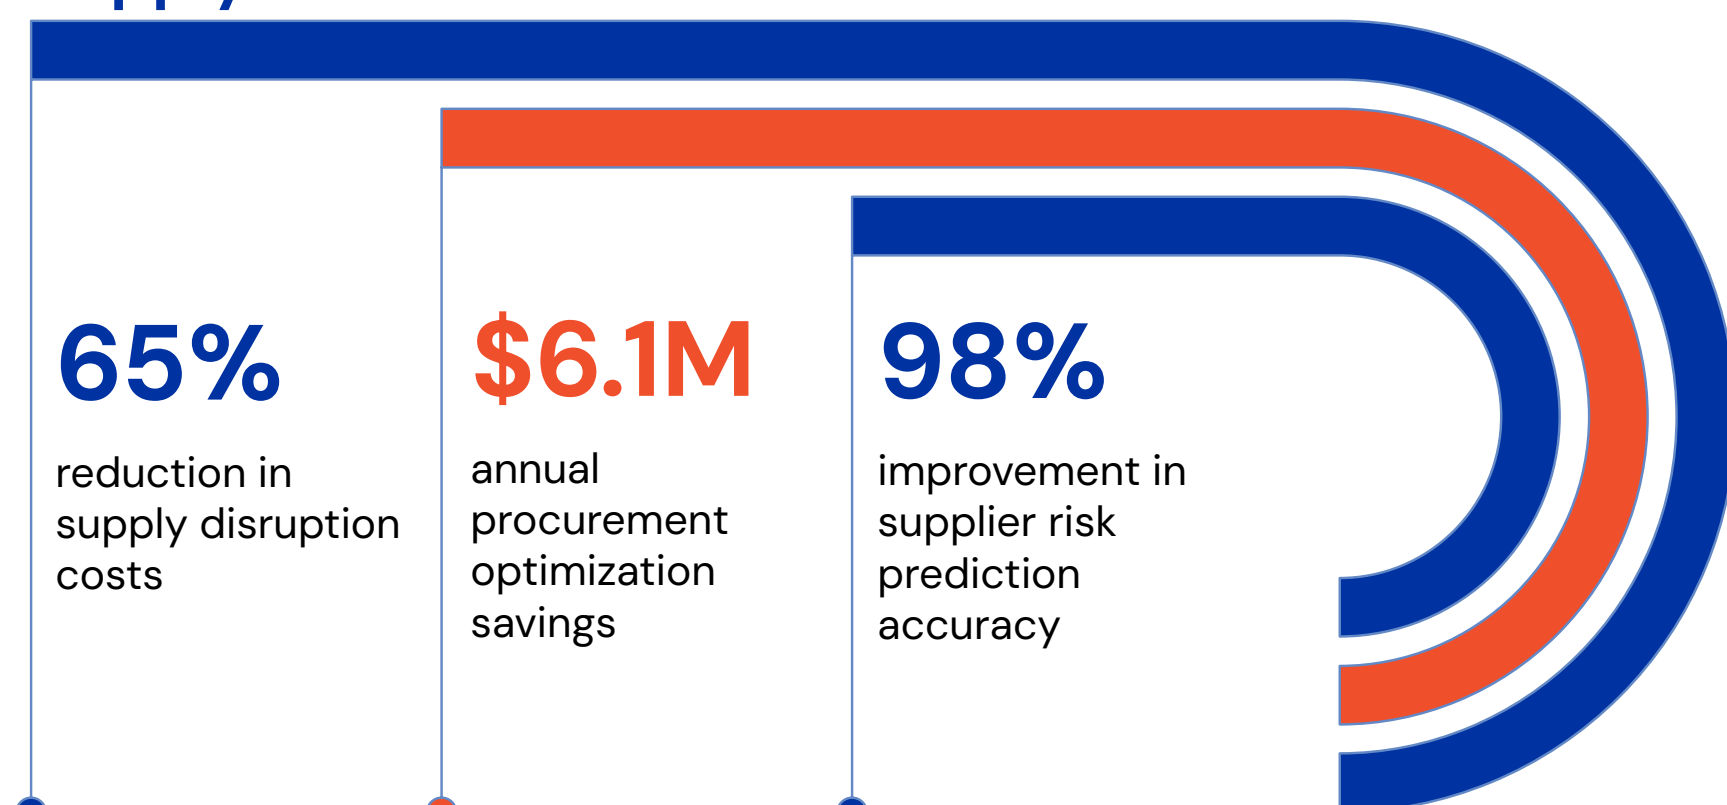

Manufacturing ROI Results

3) Building Antifragile Supply Chains

Global disruptions have exposed vulnerabilities in the supply chain. Veritis managed services deliver end to end visibility, real time monitoring, automated compliance, and AI driven demand forecasting, creating supply networks that strengthen under stress.

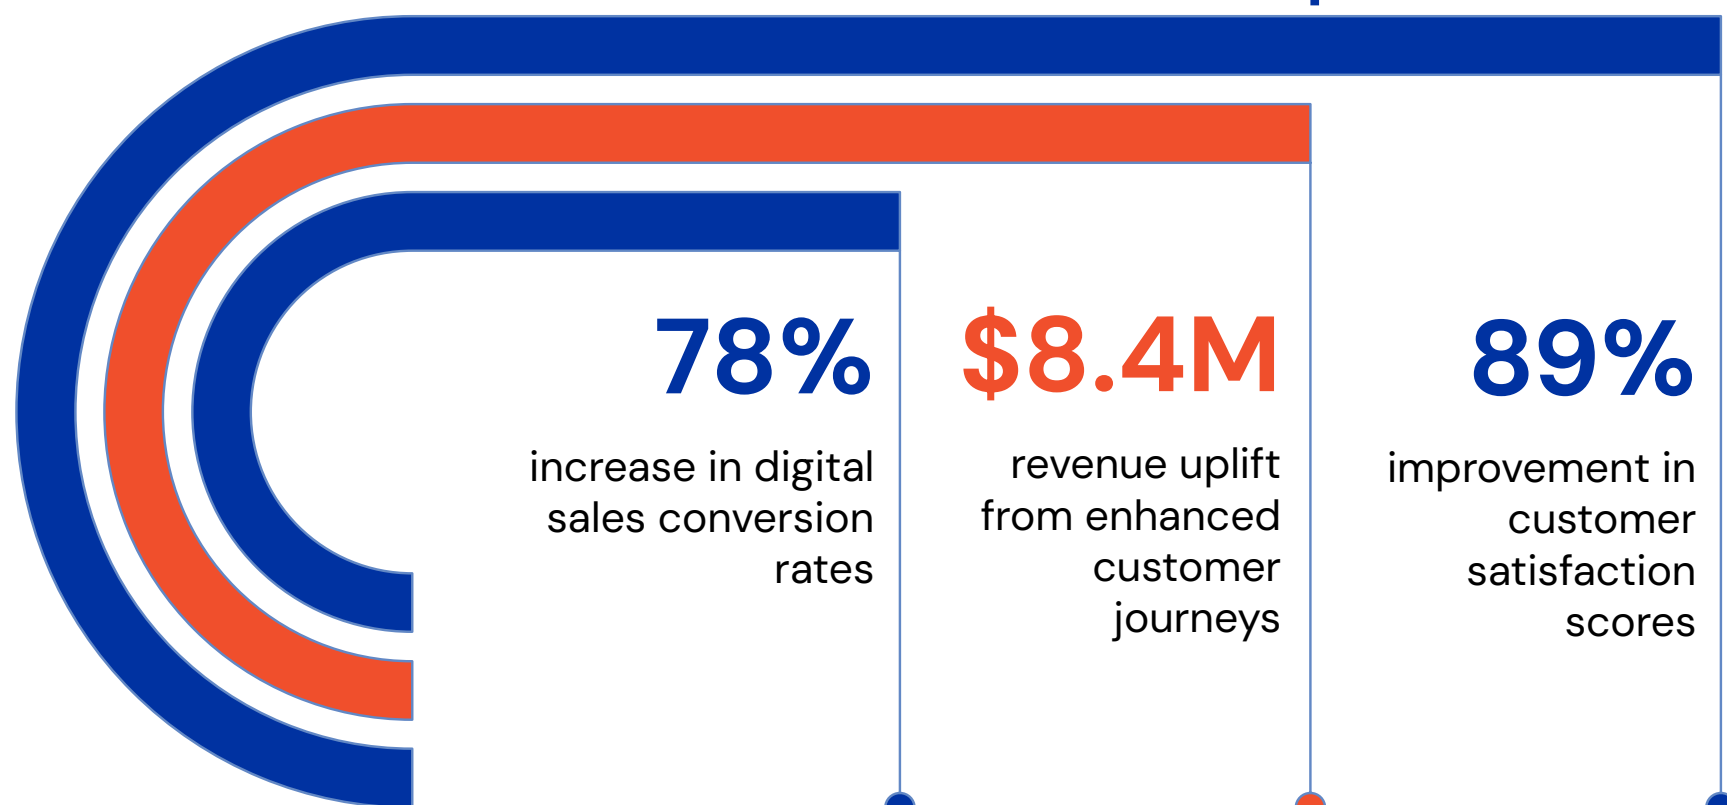

Supply Chain Transformation

4) Seamless Omnichannel CX as a Competitive Edge

Car buyers demand frictionless digital journeys. Veritis' CX platform integrates and monitors every touchpoint, delivering proactive, personalized experiences at scale.

Customer Experience ROI

5) Proactive Cybersecurity for Connected Vehicles

Connected vehicles expand attack surfaces. Veritis' automotive security operations center delivers 24/7 monitoring and automated threat response tailored to vehicle networks, manufacturing lines, and customer data protection.

Security Investment Protection
